IMPROVEMENTS

This project improves the intersection of US Route 460 at US 258 by modifying the turn lanes and pedestrian facilities. Exclusive left turn lanes will be added for the northbound and southbound approaches of US 258. The north leg of the intersection will include new sidewalks as part of the proposed improvements. On the east side, the new sidewalks will extend from US 460 to Belmont Street. Sidewalks will also be added on the northwest quadrant of the intersection. A signalized and marked pedestrian crossing will be added on the southbound approach of US 258.

PURPOSE

The additional turn lanes at this intersection will help improve operations with protected-permissive phasing. The proposed sidewalks and pedestrian facilities will help improve safety for pedestrians along US 460 and US 258.

PROJECT FUNDING

Project is to be fully funded through Smart Scale funding.
